

HYDRAGUN

Features and Specs

Stellar specs

Power

3,200 RPM top speed, strong enough for pro athletes and bodybuilders

12mm amplitude and 40lbs stall force provide deep penetration for deep-tissue work, even on the lower speeds

Range

6 speeds ranging from comfortable (for injured areas or everyday use) to intense (for work on the tightest knots)

6 attachments with varying levels of give, and different shapes to suit every muscle group

2 stainless steel heads suitable for use with massage creams or pain-relieving ointments

Battery

3-6+ hours — about double the industry standard — so it's always ready and can be used on the go

Thoughtful design features for your comfort, convenience and safety

Quietest full-sized gun on the market at 30–50dB, so it's not disruptive in quiet or shared spaces

Noise- and vibration-dampening aerospace-grade aluminum body, so your hand doesn't go numb during use

Lightweight at 1.04kg (2.29lbs), but with just enough heft that you don't need to apply pressure manually

Easy to clean and sanitize using standard alcohol wipes (including the silicone grip and all but one attachment heads)

Ergonomic 99° handle reduces wrist dorsiflexion and prevents wrist strain

Durable, breathable, water-resistant carrying case comes free with every unit

Cushy, sweat-proof nanosilicone grip is comfortable and hard-wearing, unlike some plastics, which are degraded by sweat over time

Built to last, inside and out

Motor quality — our high-torque brushless digital SmoothDrive™ motor runs cool and quiet, which means less energy lost to noise, heat, and friction, and less motor wear-and-tear

Practical, premium materials — aerospace-grade aluminum chassis is lightweight, durable, heat-dissipating, noise- and vibration-dampening, wipe-clean, and resistant to corrosion by sweat and repeated sanitization; ultra-smooth Niflon-coated barrel reduces friction and wear

Build quality — internal components (housing, rods, screws, etc) are precisely calibrated and secured to minimize vibration and rattling, so they won't shake loose over time

Risk-free offer

Free, fast shipping

Free 30-day returns— so you can try it risk-free

Free 1.5-year warranty, applied automatically (no sign-ups required)

Dedicated customer support team and robust after-sales service

Specs in Context

How we compare

	Hydragun	Theragun Pro	Hypervolt
Amplitude Distance the device head travels as it oscillates. A higher amplitude means a deeper massage, but also lower speeds, and a bigger, louder, and heavier motor.	12mm	16mm	11mm
Maximum Speed Measured in RPM (revolutions per minute). A higher speed means a more intense massage.	3200 RPM	2400 RPM	3200 RPM
Stall Force The higher the stall force, the more pressure you can apply before the gun stops running. However, stalling is rarely an issue as long as the gun uses a high-quality high-torque motor, and the gun is used in the recommended way.	40lbs	60lbs	30lbs
Battery Life Measured in milliamp-hours (mAh), but manufacturers provide estimates in hours as well. Indicates how long your device will run on a full charge.	3-6 hours	1 hour 15 minutes (2 replaceable batteries)	3 hours
Sound Level Measured in decibels. The decibel scale is logarithmic, so a 60dB gun is 10 times louder than a 50dB gun, and a 70dB gun is 100 times louder.	50dB	75dB	60dB
Build Material Plastic is a popular option as it is cheaper to manufacture. Aluminium is light but malleable, meaning it won't chip, crack, or wear over time. An aluminium chassis also holds the internal components together more securely, and provides better sound insulation and heat dissipation than plastic.	Aerospace-grade Aluminium	Composite Plastic	ABS Plastic
